PRODUCT OVERVIEW

Polish-manufactured stored-pressure VER-DIS foam extinguisher from OGNIOPHON S.A., model GW-2x A/VER-DIS, sized for offices, living rooms, bedrooms, and charging areas where buyers need to cool and suppress lithium-ion battery fires on laptops, tablets, powerbanks, and small electrical appliances without the collateral damage of ABC powder. The 2 L VERDIS agent is rated 8A for Class A solids, approved for lithium-ion battery fires and live electrical equipment up to 1000 V at a minimum one metre stand-off, and operates from +5 °C to +60 °C. Each unit ships with a red metal basket wall hanger. At ~3.6 kg gross weight and 368 mm high it is the compact VER-DIS portable for dwelling and home-office rooms where a larger cylinder would be oversized.

Values are the declared specifications for each article and are confirmed against the delivered batch on the order confirmation.
